

GIS Global Libor Plus Bond Fund

Quarterly Investment Report | 3Q21

For professional use only- marketing material.

Refer to Appendix for additional information

IMPORTANT NOTICE

Please note that this material contains the opinions of the manager as of the date noted, and may not have been updated to reflect real time market developments. All opinions are subject to change without notice.

Executive summary

Portfolio Performance

The GIS Global Libor Plus Bond Fund (Institutional share class, after fees) posted positive returns over the third quarter as spread strategies contributed to performance while interest rate strategies detracted.

CONTRIBUTORS

- Holding of investment grade corporate and high yield credit, as spreads tightened and from carry
- Holdings of securitized credit, primarily non-Agency MBS
- Short exposure to the euro as it depreciated versus the U.S. dollar

DETRACTORS

- Long exposure to select EM local rates, as yields rose
- Long exposure to the Brazilian real as it depreciated against the U.S. dollar
- Short exposure to U.K. inflation linked bonds, as breakeven inflation rates rose

Performance periods ended 30 Sep '21	3 mos.	6 mos.	1 yr.	3 yrs.	5 yrs.	10 yrs.	SI
Fund before fees	0.12	0.75	2.91	3.79	3.37	--	3.65
Fund after fees	0.00	0.51	2.41	3.28	2.86	--	3.15
Benchmark*	0.02	0.05	0.12	1.19	1.24	--	1.15

Past Performance is not a guarantee or reliable indicator of future results and no guarantee is being made that similar returns will be achieved in the future.

Unit value can go up as well as down and any capital invested in the fund may be at risk. The fund may invest in non-U.S. and non-eurozone securities which involve potentially higher risks including currency fluctuations and political or economic developments. These may be enhanced when investing in emerging markets. Funds that invest in high-yield, lower-rated securities, will generally involve greater volatility and risk to principal than investments in higher-rated securities. The fund may use derivatives for hedging or as part of its investment strategy which may involve certain costs and risks. Portfolios investing in derivatives could lose more than the principal amount invested. For more details on the fund's potential risks, please read the Prospectus and Key Investor Information Document.

Portfolio strategy

- **Defensive on rates:** Maintaining a low duration posture with a focus on relative value positioning across regions.
- **Selective on credit:** Remaining cautious on the portfolio's overall spread risk and selective within corporate credit, particularly generic high yield.
- **Long Non-Agency mortgages:** Believe Non-Agency MBS offer attractive risk-adjusted returns given robust supply and demand technicals in the housing market.
- **Currencies:** We maintained exposure to a basket of EM currencies on the back of attractive valuations and an improving economic outlook.

Quarter in Review

Developed market yields reversed course and shifted higher

The global economic recovery continued at a slower pace but remained uneven across sectors. Risk asset performance was mixed in Q3 as global equities rallied earlier in the quarter before ending about flat, while credit spreads modestly widened and oil prices surged. Developed market yields were also mixed: the U.S. 10-year yield fell at the start of the quarter before retracing the move to end at 1.49%, while the U.K. 10-year yield rose 31 bps to 1.02%. Meanwhile, central banks generally shifted toward less supportive stances, with the Fed indicating that it would begin tapering its asset purchases within the calendar year and may even raise rates as early as 2022.

Developed market yields rose sharply in the latter half of the quarter, driven by inflation concerns and anticipation of scaled back support from central banks. Despite a shift higher at the end of Q3, the U.S. 10yr yield still remained below 2021 highs as well as pre-COVID levels

Agency MBS spreads ended the quarter little changed, though the sector had dispersion along the coupon stack with higher coupons performing the best. Meanwhile, Non-agency MBS continued to perform well

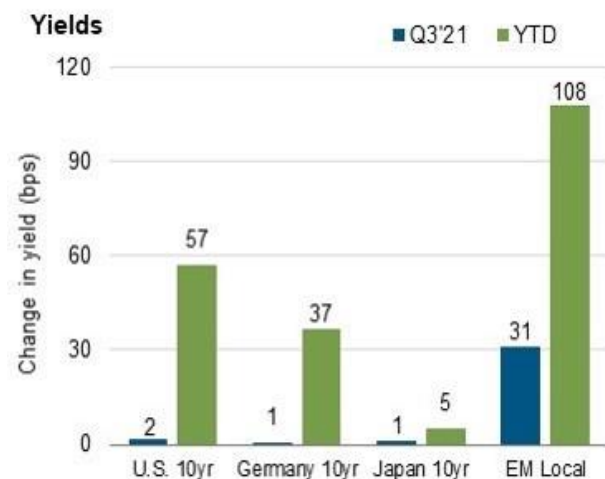

Market Summary

Q3'21: Intra-quarter volatility contributed to more muted market moves overall

The Fund's spread sector strategies contributed to performance, while currency and duration strategies detracted

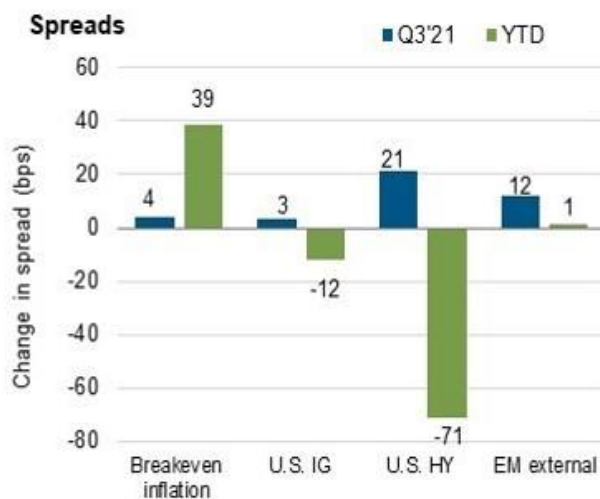

Developed market debt

Developed market yield moves were mixed over the quarter. In the U.S., yields fell at the start of the quarter before retracing their initial levels after the Fed signaled it could begin tapering its asset purchases within the calendar year and may raise rates as early as 2022. In the U.K. yields rose meaningfully across the curve, while German and Japanese curves remained largely range-bound.

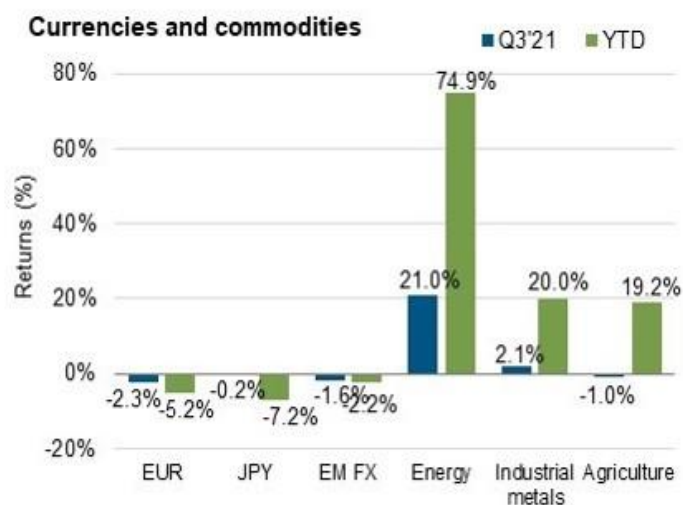

Mortgage-backed securities

Agency MBS returned 0.10%, outperforming like duration Treasuries by 3 bps. The sector underperformed at the beginning of the quarter, but given higher rates, a mild bear steepening, and taper discussions stemming from the Fed, higher coupons outperformed towards the end of the quarter. Legacy non-Agency residential MBS spreads remained flat, while non-Agency commercial MBS returned 0.12%, outperforming like-duration Treasuries by 11 bps.

Credit

U.S. investment grade credit spreads widened 3 bps, ending the quarter at 80 bps. The sector returned -0.03%, underperforming like-duration treasuries by -0.17%. Credit spreads widened amid rising concerns surrounding the Delta variant, prolonged infrastructure bill and debt ceiling negotiations, and idiosyncratic disruptions from China. However, demand remains strong as investors continue to seek high quality income producing assets.

Source: U.S. 10yr, Germany 10yr, Japan 10yr, Breakeven inflation (Bloomberg); EM local (JPMorgan GBI-EM Global Diversified Composite Yield to Maturity Index); U.S. investment grade credit (Bloomberg Barclays U.S. Aggregate Credit Average OAS Index); U.S. high yield credit (Bloomberg Barclays U.S. Corporate High Yield Average OAS Index); EM external (JPMorgan Emerging Bond Index Global Sovereign Spread); EUR (EUR/USD Spot Exchange Rate - Price of 1 EUR in USD); JPY (USD/JPY Spot Exchange Rate - Price of 1 USD in JPY); EM currencies (JPMorgan ELMI Plus Composite); Energy (Bloomberg Energy Subindex Total Return Index); Industrial metals (Bloomberg Industrial Metals Subindex Total Return Index); Agriculture (Bloomberg Agriculture Total Return Index); Agency MBS (Bloomberg US Agency Fixed Rate Index); Non-Agency MBS (Bloomberg Barclays Investment Grade Non-Agency CMBS Index); Like-duration treasuries or global government bonds are calculated by the index provider by comparing the index return to a hypothetical matched position of treasuries or global government bond, respectively.

Global growth and inflation likely to moderate in 2022

Above trend growth likely for 2021 and 2022, though the pace of growth to slow

Inflation likely to remain elevated in the near-term before gradually slowing into the second half of 2022

Portfolio Outlook

Strategic outlook

PIMCO's baseline outlook for the cyclical horizon has the global economy continuing its uneven recovery in 2021 before shifting to a more moderate pace of above-trend growth in 2022. Since inflation follows growth with a lag, we project inflation in developed markets will also slow into the second half of 2022. While levels could remain elevated in the near-term, the factors that drove inflation higher should dissipate over the course of the next year. However, we are mindful that longer-term inflation expectations could accelerate further. Meanwhile, several developed market central banks have already begun tapering asset purchase programs and we expect that others will likely follow.

Key strategies

Duration

The fund continues to hold a defensive duration profile, preferring U.S. duration versus other developed market countries given the higher level of yields and potential downside risk mitigation. We maintain our modest short exposure to UK duration as we view UK rates as relatively depressed, and our modest long to Italian and Canadian duration. We have also maintained our exposure to local rates in targeted emerging market countries across South Africa, Brazil, China, Peru and Mexico.

Position

Spread

We maintain selective investments in corporate credit with a focus on high quality positions. We diversify spread exposures, seeing value in senior tranches of legacy Non-Agency MBS and AAA-rated CLOs, which have never defaulted and provide a yield pick-up versus high quality corporates. We also hold select positions in EM external debt focusing on sovereign and quasi-sovereign debt in high-quality countries.

Currency

We maintain our modest exposure to a select basket of high carry EM currencies on the back of attractive valuations and an improving outlook. We maintain our short to the euro and the Canadian dollar, as well as modestly added to our long exposure to the British pound.

Source: PIMCO

*Non-agency may include non-agency mortgage backed securities, asset backed securities, and commercial mortgage backed securities

**For spread sectors, the relevant spread duration contribution is used

Important Disclosures

Past performance is not a guarantee or a reliable indicator of future results. The “gross of fees” performance figures are presented before management fees and custodial fees, but do reflect commissions, other expenses and reinvestment of earnings. The “net of fees” performance figures reflect the deduction of ongoing charges. All periods longer than one year are annualized.

Statements concerning financial market trends or portfolio strategies are based on current market conditions, which will fluctuate. There is no guarantee that these investment strategies will work under all market conditions or are appropriate for all investors and each investor should evaluate their ability to invest for the long term, especially during periods of downturn in the market. Outlook and strategies are subject to change without notice.

Portfolio structure is subject to change without notice and may not be representative of current or future allocations.

The following defined terms are used throughout the report. **Emerging market short duration instruments** includes an emerging market security or other instrument economically tied to an emerging market country by country of risk with an effective duration less than one year and rated investment grade or higher or if unrated, determined to be similar quality by PIMCO. **Net other short duration instruments** includes securities and other instruments (except instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money and derivatives offset. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. **Short duration derivatives and derivatives offsets** include: 1) derivatives with an effective duration less than one year and where the country of risk is not an emerging market country (for example, Eurodollar futures) and 2) offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position which in certain instances may exceed the actual amount owed on such positions. **Municipals/Other** may include convertibles, preferred and yankee bonds.

The average distribution yield is the average of the last four quarterly distribution yields. The quarterly distribution yield is calculated by annualizing the quarter's distribution and dividing by the NAV on the last business day of the period. It does not include long- or short-term capital gains distributions. Average coupon is the average of the coupon payments of the underlying bonds within the portfolio. Average coupon is the average of the coupon payments of the underlying bonds within the portfolio. Average effective maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security. Duration is the measure of a bond's price sensitivity to interest rates and is expressed in years. Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change. PIMCO uses an internal model for calculating effective duration, which may result in a different value for the duration of an index compared to the duration calculated by the index provider or another third party. Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns. Tracking error measures the dispersion or volatility of excess returns relative to a benchmark. Tracking error measures the dispersion or volatility of excess returns relative to a benchmark.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index.

Forecasts, estimates and certain information contained herein are based upon proprietary research and should not be interpreted as investment advice, as an offer or solicitation, nor as the purchase or sale of any financial instrument. Forecasts and estimates have certain inherent limitations, and unlike an actual performance record, do not reflect actual trading, liquidity constraints, fees, and/or other costs. In addition, references to future results should not be construed as an estimate or promise of results that a client portfolio may achieve.

Important Disclosures

A word about risk: Absolute return portfolios may not fully participate in strong positive market rallies. Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and their value may fluctuate in response to the market's perception of issuer creditworthiness; while generally supported by some form of government or private guarantee there is no assurance that private guarantors will meet their obligations. **High-yield**, lower-rated, securities involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. Equities may decline in value due to both real and perceived general market, economic, and industry conditions. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. Diversification does not ensure against loss.

Benchmark

Unless referenced in the prospectus and relevant key investor information document, a benchmark or index in this material is not used in the active management of the Fund, in particular for performance comparison purposes.

Where referenced in the prospectus and relevant key investor information document a benchmark may be used as part of the active management of the Fund including, but not limited to, for duration measurement, as a benchmark which the Fund seeks to outperform, performance comparison purposes and/or relative VaR measurement. Any reference to an index or benchmark in this material, and which is not referenced in the prospectus and relevant key investor information document, is purely for illustrative or informational purposes (such as to provide general financial information or market context) and is not for performance comparison purposes. Please contact your PIMCO representative for further details.

The fund is actively managed in reference to the 1 Month USD LIBOR as further outlined in the prospectus and key investor information document.

Correlation

As outlined under "Benchmark", where [disclosed herein] and referenced in the prospectus and relevant key investor information document, a benchmark may be used as part of the active management of the Fund. In such instances, certain of the Fund's securities may be components of and may have similar weightings to the benchmark and the Fund may from time to time show a high degree of correlation with the performance of any such benchmark. However the benchmark is not used to define the portfolio composition of the Fund and the Fund may be wholly invested in securities which are not constituents of the benchmark.

Investors should note that a Fund may from time to time show a high degree of correlation with the performance of one or more financial indices not referenced in the prospectus and relevant key investor information document. Such correlation may be coincidental or may arise because any such financial index may be representative of the asset class, market sector or geographic location in which the Fund is invested or uses a similar investment methodology to that used in managing the Fund.

Important Disclosures

Important Disclosures

Acronyms and definitions of investment terms used throughout the report:

Alpha is a measure of performance on a risk-adjusted basis calculated by comparing the volatility (price risk) of a portfolio vs. its risk-adjusted performance to a benchmark index; the excess return relative to the benchmark is alpha.

Average coupon is the average of the coupon payments of the underlying bonds within the portfolio.

Average effective maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security.

"Bend-but-not-break" refers to credits that PIMCO would not expect to default in a credit-stressed environment.

Beta is a measure of price sensitivity to market movements. Market beta is 1.

Breakeven inflation rate (or expectation) is a market-based measure of expected inflation or the difference between the yield of a nominal and an inflation-linked bond of the same maturity.

Carry is the rate of interest earned by holding the respective securities.

The terms **"cheap"** and **"rich"** as used herein generally refer to a security or asset class that is deemed to be substantially under- or overpriced compared to both its historical average as well as to the investment manager's future expectations. There is no guarantee of future results or that a security's valuation will ensure a profit or protect against a loss.

CPI is the Consumer Price Index.

The **credit quality** of a particular security or group of securities does not ensure the stability or safety of an overall portfolio. The quality ratings of individual issues/issuers are provided to indicate the credit-worthiness of such issues/issuer and generally range from AAA, Aaa, or AAA (highest) to D, C, or D (lowest) for S&P, Moody's, and Fitch respectively.

Dividend yield is represented by the weighted average coupon divided by the weighted average price.

Duration is the measure of a bond's price sensitivity to interest rates and is expressed in years.

Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change.

Forward curve is a function graph that defines the prices at which a contract for future delivery or payment can be concluded today.

Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns.

Like-duration Securities are calculated by the index provider by comparing the index return to a hypothetical matched position in the security.

The **Option Adjusted Spread (OAS)** measures the spread over a variety of possible interest rate paths. A security's OAS is the average return an investor will earn over Treasury returns, taking all possible future interest rate scenarios into account. The OAS is the net spread over the swap curve that will on average be earned if the security is held to maturity.

"Risk assets" are any financial security or instrument that are likely to fluctuate in price.

Risk premia is the return in excess of the risk-free rate of return an investment is expected to yield.

Roll yield is the yield that a futures investor captures as their long position in a futures contract converges to the spot price.

"Safe haven" is an investment that is expected to retain or increase in value during times of market turbulence.

The **SEC yield** is an annualized yield based on the most recent 30 day period.

Tracking error measures the dispersion or volatility of excess returns relative to a benchmark.

To relate the price sensitivity of ILBs to changes in nominal yields, yield beta is applied to nominal changes to arrive at a price sensitivity of ILBs to changes in nominal rates. A **yield beta** of 0.90 implies that if nominal yields move 100 basis points, real yields will move 90 basis points. ILBs with long maturity may respond differently to changes in nominal rates than shorter maturity ILBs.

The distribution yield for monthly paying Funds is calculated by annualizing actual dividends distributed for the monthly period ended on the date shown and dividing by the net asset value on the last business day for the same period. The distribution yield for quarterly paying Funds is calculated by taking the average of the prior four quarterly distribution yields. The quarterly distribution yields are calculated by annualizing actual dividends distributed for the quarterly period ended on the most recent quarterly distribution date and dividing by the net asset value for the same date. The yield does not include long- or short-term capital gains distributions.

Asset-Backed Security (ABS); Bank of England (BOE); Bank of Japan (BOJ); Breakeven Inflation (BEI); Collateralized Debt Obligation (CDO); Collateralized Loan Obligation (CLO); Commercial Mortgage-Backed Security (CMBS); Developed Markets (DM); Emerging Markets (EM); Federal Reserve Board (The Fed); Europe Central Bank (ECB); Federal Open Market Committee (FOMC); Foreign Exchange (FX); Gross Domestic Product (GDP); Gulf Cooperation Council (GCC); High Yield (HY); Inflation-Linked Bond (ILS); Investment Grade (IG); Leveraged-buyout (LBO); Loan-to-Value (LTV); Master Limited Partnership (MLP); Mortgage-Backed Security (MBS); Market Weighted Spread (MWS); Real Estate Investment Trust (REIT); Residential Mortgage-Backed Security (RMBS); Treasury Inflation-Protected Security (TIPS); Year-over-Year (YoY)
